 NOVARTIS

Novartis advances medicine through research aimed at improving the quality and length of life. As a leading global pharmaceutical company, we use innovative science and digital technologies to create transformative treatments in areas of special medical importance. Our purpose is to reimagine medicine to improve and extend people's lives. In our search for new medicines, we rank among the world's leading companies that invest in research and development. Our vision is to become the most valued and trusted pharmaceutical company in the world.

Novartis' medicines affect the lives of nearly 800 million people worldwide, and we are constantly looking for innovative ways to expand access to our newest therapies. There are currently more than 30 new molecules in the research phase. About 78,000 people in approximately 120 countries are employed by Novartis.

Our strategy is to deliver high-value medicines that alleviate society's greatest disease through leadership in the field of technology applied in research and development, as well as new drug approaches.

To support this strategy, we have clearly defined focus areas and priorities for creating value for our company, our shareholders and society. Our focus is on five key therapeutic areas: cardiovascular disease, immunology, neuroscience, solid tumors and hematology.

Using the power of leading-edge science to save and improve lives around the world

For more than a century, we've been at the forefront of research, bringing forward medicines, vaccines and innovative health solutions for some of the world's most challenging diseases.

At MSD, we rise to the challenge in pursuit of better health outcomes.
